

U.A.T. UNIVERSAL AUDIO TRANSMITTER

Turn your computer or any desired media source into a wireless device!

This product features high quality wireless technology to enable the customer to run any audio source to any room in the house. Simply connect the SoundCast U.A.T. transmitter to the source and pair it with the iCast receiver which is connected to the receiver/amplifier. This means you can use all your playlists from iTunes stored on your computer in your office and send them wirelessly throughout the house.

How to make this device work

- Connect the transmitter to the audio output on the desired source.
- Connect the iCast receiver (Sold separately) to the input on the chosen amplifier or powered speakers.
- Wires for a basic installation are provided!!

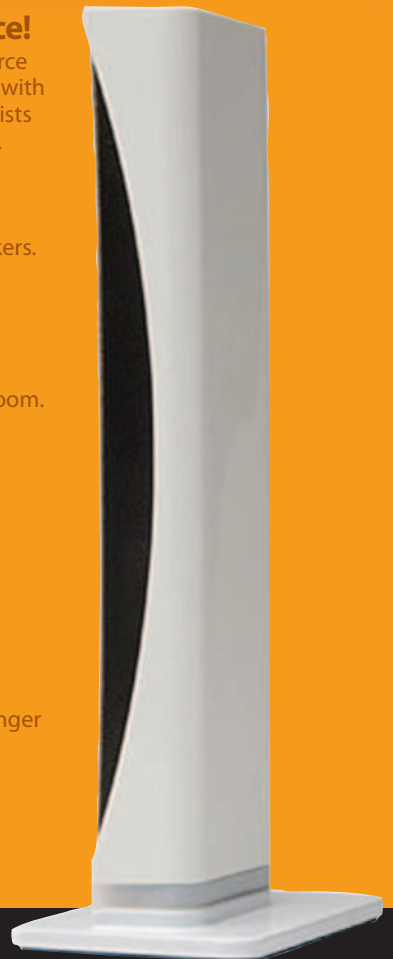

Tech Notes

- Make sure to have the channel of the Transmitter and the receiver (Sold separately) is set to the same i.e. Channel 1.
- If the amplifier or powered speakers are in the other room simply flip the switch to "M" – Multiroom.

Features & Specs

- For use with all Soundcast receivers including iCast, SpeakerCast, and OutCast
- USB Audio structure to control basic functions of track forward, track back, pause/play for commonly used media players through USB connection to PC
